DATA & INFRASTRUCTURE MIGRATION ASSESSMENT

The cloud is much more than a platform - it represents a different operational model. Which is why its so important to consider everything from costs to service delivery.

In collaboration with Microsoft, we'll help you set-up your cloud strategy with a Data & Infrastructure Migration Assessment. We'll assess your current infrastructure, discuss how to optimize current server and workload applications, and recommend a strategy for migrating workloads to the cloud.

MAKING THE MOVE TO MICROSOFT AZURE CLOUD

We are specialists in digital transformation. From initial envisioning to fully managed cloud, we provide a variety of services to help you realize the full value of cloud. We complete the following steps:

Discovery
Initiation workshop designed to catalogue business goals, technical requirements and constraints.

This also includes an automated collection of asset intelligence.

Analyze & Verify
Analyze data and categorize workloads by type and future state.

Establish an estimate for supplementary Azure costs and draft a findings validation workshop.

Present & Recommend
Present findings that include readiness levels, Azure subscription costs and optimization opportunities.

Includes items to consider and recommended next steps relating to an effective Azure migration.

ASSESSMENT DELIVERABLES

✔
- Server Inventory, utilization and readiness levels
- Identification of target Azure candidates
- Azure cost projections
- Guidance on dependencies & other pre requisites
- Outline of phased migration approach

BENEFITS

✔
- Understand your Azure cloud readiness
- Streamline licensing
- Control cloud costs
- Enable workload prioritization
- Gain strategic insights

NEXT STEPS

The Data & Infrastructure Migration Assessment can play a critical role in your decision-making process as you progress on your cloud transformation journey. Talk to one of our cloud experts to get started today.
